Valued Customer,

To provide more efficient CLP and related regulatory updates, Ecolab recently upgraded its platform for generating Safety Data Sheets (SDS). As a result, you may notice some changes to the Ecolab SDS:

- Use Solution: for products that are diluted for use, safety-related information for the product as used is added to the SDS along with the information for the product as sold. This information is highlighted by a horizontal shaded box presented below the data for the product as sold.
- Exposure scenarios: while we are reliant upon our suppliers for the information, when data is available, exposure scenarios will be included in the annex to the SDS as required under the REACH regulation.
- Safety-related statements: the new authoring platform uses content from a different third-party provider; therefore some of the precautionary language may be slightly different than what is in our most recently published SDSs.
- Formatting: changes to the general appearance, the document title, and section headers reflect templates in the new system; the logo placement changed to the upper left side of page one.

The SDS continues to comply with all applicable EU and local regulatory requirements. Safety is a critical part of the Ecolab history. This principle remains as we commit to providing you with the information you need to safely use and handle our products in the workplace.

Sincerely,

Timothy M. O'Brien, Ph. D.
